

Project Packages and Estimated Pricing

ctrlaltcrew — Demonstration Pricing Reference

This document lists ctrlaltcrew's standard project packages with estimated price ranges, typical included features, and typical timelines. These figures give clients and the AI consultant a realistic starting point for a conversation; every project still receives a specific estimate after requirement gathering. All amounts are shown in USD for consistency.

1. How Estimates Work

Every project is priced individually based on its specific requirements. The ranges in this document represent the typical span for projects of that category, based on common feature sets. A final estimate is only provided after the requirement-gathering stage of the project process, when the specific features, integrations, and platforms are known.

2. Package Summary Table

Package	Estimated Price Range	Typical Timeline
Basic Website	\$800 – \$1,500	2 – 3 weeks
Business Web Application	\$2,500 – \$6,000	4 – 8 weeks
E-Commerce Application	\$3,000 – \$8,000	5 – 9 weeks
Mobile Application (Single Platform)	\$4,000 – \$9,000	6 – 10 weeks
Mobile Application (Cross-Platform, iOS + Android)	\$6,000 – \$12,000	8 – 12 weeks
Custom Backend / API Development	\$2,000 – \$6,000	3 – 7 weeks
AI Chatbot (FAQ / Customer Support)	\$1,500 – \$4,000	3 – 5 weeks
RAG-Based Knowledge Assistant	\$3,500 – \$9,000	5 – 9 weeks
Custom AI/LLM Application (Agentic Workflows)	\$6,000 – \$15,000+	8 – 14 weeks

3. Package Details

Basic Website

Estimated price range: \$800 – \$1,500

Typical timeline: 2 – 3 weeks

Typical features included: Up to 5 pages, responsive design, contact form, basic SEO setup, CMS or static build

Business Web Application

Estimated price range: \$2,500 – \$6,000

Typical timeline: 4 – 8 weeks

Typical features included: Custom UI, user accounts, admin dashboard, database-backed features, role-based access

E-Commerce Application

Estimated price range: \$3,000 – \$8,000

Typical timeline: 5 – 9 weeks

Typical features included: Product catalog, cart & checkout, payment gateway integration, order management, admin panel

Mobile Application (Single Platform)

Estimated price range: \$4,000 – \$9,000

Typical timeline: 6 – 10 weeks

Typical features included: Native or cross-platform build for iOS or Android, API integration, push notifications

Mobile Application (Cross-Platform, iOS + Android)

Estimated price range: \$6,000 – \$12,000

Typical timeline: 8 – 12 weeks

Typical features included: Single codebase for both platforms, shared backend integration, app store deployment support

Custom Backend / API Development

Estimated price range: \$2,000 – \$6,000

Typical timeline: 3 – 7 weeks

Typical features included: REST or GraphQL API, database design, authentication, third-party integrations, documentation

AI Chatbot (FAQ / Customer Support)

Estimated price range: \$1,500 – \$4,000

Typical timeline: 3 – 5 weeks

Typical features included: LLM-powered chatbot, scripted + generative responses, website or WhatsApp integration

RAG-Based Knowledge Assistant

Estimated price range: \$3,500 – \$9,000

Typical timeline: 5 – 9 weeks

Typical features included: Document ingestion, vector database, retrieval pipeline, chatbot or search interface, source citations

Custom AI/LLM Application (Agentic Workflows)

Estimated price range: \$6,000 – \$15,000+

Typical timeline: 8 – 14 weeks

Typical features included: Multi-step agents, tool use, workflow automation, integrations with internal systems, custom evaluation

4. Package Descriptions and Scope Notes

Basic Website — \$800 – \$1,500

A straightforward informational or brochure-style website, suitable for small businesses or individuals who need an online presence without complex functionality. Includes up to five pages, a responsive layout, a contact form, and basic on-page SEO. Typical timeline is 2 to 3 weeks from approved design to launch.

Business Web Application — \$2,500 – \$6,000

A custom web application with user accounts, an admin dashboard, and database-backed features tailored to a specific business workflow (e.g., a booking system, an internal reporting tool, or a client portal). Typical timeline is 4 to 8 weeks depending on the number of user roles and custom features.

E-Commerce Application — \$3,000 – \$8,000

A full online store including a product catalog, shopping cart, checkout, payment gateway integration, and an admin panel for managing products and orders. Typical timeline is 5 to 9 weeks. Multi-vendor marketplaces or subscription billing extend beyond this range and are estimated as a custom scope.

Mobile Application (Single Platform) — \$4,000 – \$9,000

A mobile application built for either iOS or Android, connected to a backend/API, with core functionality and push notification support. Typical timeline is 6 to 10 weeks.

Mobile Application (Cross-Platform, iOS + Android) — \$6,000 – \$12,000

A single cross-platform codebase covering both iOS and Android, sharing one backend integration. Typical timeline is 8 to 12 weeks, including app store submission preparation for both platforms.

Custom Backend / API Development — \$2,000 – \$6,000

A standalone backend and API layer, including database design, authentication, and integrations, suitable as the foundation for a web app, mobile app, or connecting existing systems together. Typical timeline is 3 to 7 weeks depending on the number of endpoints and integrations required.

AI Chatbot (FAQ / Customer Support) — \$1,500 – \$4,000

An LLM-powered chatbot for FAQ answering, lead capture, or first-line customer support, deployed on a website or messaging channel such as WhatsApp. Typical timeline is 3 to 5 weeks. This package does not include a custom document-retrieval (RAG) pipeline; for a chatbot that must answer from a client's own documents, see the RAG-Based Knowledge Assistant package.

RAG-Based Knowledge Assistant — \$3,500 – \$9,000

A retrieval-augmented generation system that ingests a client's documents, stores them as searchable embeddings, and answers questions through a chatbot or search interface with source references. Typical timeline is 5 to 9 weeks, with the low end suited to a smaller, well-organized document set and the high end suited to larger or more varied content.

Custom AI/LLM Application (Agentic Workflows) — \$6,000 – \$15,000+

A custom AI system involving multi-step agents, tool use, and integration with internal systems to automate a business workflow. Typical timeline is 8 to 14 weeks. This is the most variable category; complex multi-system agentic workflows can exceed the listed range and are scoped individually after requirement gathering.

5. Factors That Can Increase Cost

The following factors commonly move a project toward the higher end of its estimated range or beyond it:

- Number and complexity of custom features
- Number of user roles or account types
- Third-party integrations (payment gateways, CRMs, external APIs)
- Volume and complexity of source documents for RAG/AI systems
- Custom UI/UX design versus template-based design
- Number of platforms targeted (web, iOS, Android)
- Data migration from legacy or existing systems
- Compliance or security requirements specific to the client's industry
- Post-launch support tier and response-time expectations

6. What Is Not Included by Default

- Ongoing hosting, domain, and third-party service fees (e.g., cloud hosting, payment gateway fees) are billed separately by those providers, not included in the project price.
- Post-launch support beyond an initial warranty period requires a separate support plan; see the Support and Maintenance document.
- Paid third-party licenses (e.g., premium plugins, stock content) are billed at cost if required for the project.

7. Requesting an Accurate Estimate

To receive an estimate closer to a specific number rather than a broad range, clients are encouraged to share as much detail as possible up front: business type, required features, target platform(s), required integrations, and (for AI projects) the volume and format of any source documents. See the Project Requirements Guide for a full checklist.
